

▼ **INGREDIENTS**

Supplement Facts	
Serving Size: 2 capsules	
Amount Per Serving	% Daily Value
Vitamin A	20000 IU 400
Vitamin C	320 mg 533
Calcium (Ascorbate).....	36 mg 4
Niacin.....	18 mg 90
Vitamin B6 (Pyridoxine HCl).....	1.8 mg 90
Proprietary Blend.....	630 mg *
Paprika (Herb)	
RNA/DNA Thymus Tissue Factors	
RNA/DNA Hypothalamus Tissue Factors	
RNA/DNA Adrenal Tissue Factors	
L-Phenylalanine	

* Daily Value not established.
Other Ingredients: Gelatin, Dextrose and Leucine

▼ **DOSAGE**

- 1-2 capsules with a Bio-Function or other formula up to twice a day for 2-4 weeks.
- Concentrated extract, CX1 (Activator): 2-3 drops with designated formula.

▼ **PACKAGING**

- 30 capsules/eco-bottle.
- Concentrated extract CX#1 (Activator): 1/2 oz. glass bottle with dropper.

▼ **PERSPECTIVE**

The BioCommand System employs commanding formulas to “direct” the impact of a BioFunction formula in six different directions: Activation, Building, Bacterial Relations, Fungal Relations, Normalization Influences, and Deep Repair processes, thus adding an overtone directive to the concept of targeted nutrition.

▼ **LIFESTYLE**

#1 (Activator)

#2001 CX #1 (Activator)

A revolutionary and unique concept in targeted nutrition. Designed to be paired with a BioFunction formula that targets a specific tissue, e.g. B (Brain) + #1 (Activator) in tandem. It focuses on the targeted tissue’s “innate, active metabolic processes” during its normal circadian “active” cycle.

- Adds an activating nuance to the beneficial influences of the paired BioFunction formula
- Designed to support the hypothalamic regulation of neuroendocrine functions
- Formulated to increase the impact of BioFunction formulas

▼ **INDICATIONS**

- Nutritional enhancement of normal cellular metabolic processes
- Magnify the impact of the companion BioFunction formula
- Provide nutritional elements to support the normal hypothalamic regulation of body processes

▼ **KEY COMPONENTS**

- **Vitamin A** – Helps form and maintain healthy skin, teeth, skeletal and soft tissue, and mucous membranes. Also known as retinol because it produces the pigments in the eye’s retinas. Promotes good vision, especially in low light.
- **Vitamin C** – An essential nutrient required from the daily diet. Co-factor of several enzyme systems. Supports the brain’s ascorbate, a critically important antioxidant.
- **RNA/DNA Hypothalamus Factors** – Amino acid cellular identity factors for hypothalamus tissue integrity.
- **Phenylalanine** – An essential amino acid known for its role in many critical brain cellular metabolic processes. Necessary for proper thyroid function, it also supports optimal brain metabolic function. Converts to tyrosine for balanced brain activities.
- **Paprika** – A culinary spice containing valuable antioxidants such as the complete Vitamin C complex. High in complete spectrum vitamin C and its synergistic components.
- **Vitamin B₆** – Supports normal brain shrinkage resistance processes and helps maintain normal, energetic brain metabolic and neurotransmitter activities.
- **RNA/DNA Adrenal Factors** – Amino acid cellular identity factors to lend support to the normal Adrenal/ Hypothalamus communication and regulation system.
- **Niacin** – Research shows this B-vitamin helps the brain’s natural recovery processes from the normal wear and tear of cellular and vascular activities. Helps balance the brain’s methylation processes.
- **Calcium ascorbate** – An antioxidant and co-factor in several brain metabolic pathways: including catecholamine synthesis, collagen production and regulation of HIF-1 α , a transcriptional regulator involved in oxygen processes.

▼ **CONTRAINDICATIONS**

Phenylketonuria (PKU) genetic disorder. Contains phenylalanine, an essential amino acid, contraindicated in phenylketonuria. Contraindicated when L-Dopa is a prescription medication.

▼ **CLINICIAN CONSENSUS**

Example of BioCommand #1 Utilization:

- **Support the thyroid’s metabolic activity:**
#1 Activator + 39 Gf-Thyroid.
- **Support the adrenal gland’s metabolic activity:**
#1 Activator + 39 Ga-Adrenal.
- **Support the brain’s inherent activity:**
#1 Activator + #12 B-Brain.

▼ **BACKGROUND**

BioCommand formulas are a milestone breakthrough in the history of herbology. They were designed by Doc Wheelwright to increase the effectiveness and action of a BioFunction formula (specific tissue nutrition) through enhanced assimilation, increased tissue receptivity, and most importantly, by specifying the direction and impact of the combined herbal matrix toward one of six specific cellular functions (commands). This allows the herbal practitioner greater precision in clinical applications of herbal medicine.

▼ **SYNERGISTIC CONSIDERATIONS**

#1 (Activator) is a complimentary, enhancing formula to any of the BioFunction formulas and many other Systemic formulas by its inclusion. Clinicians’ favorite applications include:

- B (Brain) + #1 (Activator)
- C (Colon) + #1 (Activator)
- Ga (Adrenal) + #1 (Activator)
- Gb (Pituitary) + #1 (Activator)
- Gf (Thyroid) + #1 (Activator)
- Gt (Thymus) + #1 (Activator)
- HQ (Heart Energy) + #1 (Activator)
- I (Eyes) + #1 (Activator)
- K (Kidney) + #1 (Activator)
- L (Liver) + #1 (Activator)
